

INDECK[®]

Emergency Grate Carrier Bar Indeck Travagrate[®] Stoker

Indeck Keystone Energy
Emergency Grate Carrier Bar

An untimely replacement of a full-length grate carrier bar is a hindrance to operations, especially if only the end portion of the bar is in need of repair. For this reason, Indeck has developed a 2½-foot grate carrier bar for our Travagrate[®] stoker that can be quickly spliced into place during an emergency outage. This will allow the boiler to get back on-line in the fastest possible time frame.

Features

- The 2½-foot grate carrier bar is fabricated from the same high quality steel material as the full-length bar ensuring operational compatibility.
- The emergency bar is spliced to the existing grate carrier bar by means of a tie plate that straddles the splice joint and bolts to both bars.
- The emergency bar comes complete with splicing plates and fasteners.

Application

When only the end of the bar is in need of repair, IKE's 2½-foot emergency grate carrier bar provides a practical alternative to the time consuming replacement of a full-length bar.

Benefits

- The damaged portion of the grate carrier bar's end can be replaced with this emergency bar section in less time than needed to replace a full length bar.
- Fast repair cycle shortens boiler down time
- Ease of handling and inventory storage – as well as low cost shipping
- Next day/same day shipment available
