

Large Shop Assembled Boilers

Indeck Keystone Energy custom designs large shop assembled watertube boiler systems. The shop assembly eliminates the field man hours usually associated with this size of boiler. These boilers include tube and membrane furnace and sidewalls which prolong boiler life while reducing maintenance. The boiler is designed to be jacked up so a heavy haul multi-axle truck can be rolled under boiler for loading. The truck can then travel over the road or onto a barge for water transport. The maximum process conditions for this design are:

- Steam flow 1,000,000 lb/hr
- Operating Pressure 2,000 psig
- Steam Temperature 1,050 °F
- Fuels: Gas, Oil, Blast Furnace Gas, Low BTU Gases
